Portfolio: cheikhnasakho.fr

Profile

Full-stack developer with nearly 4 years on a B2B eco-design SaaS. I owned an embedded widget end to end, live at major e-commerce retailers and validated under load (52,509 requests, 0 errors), then proposed and led the migration to TypeScript, NestJS and an Nx monorepo. Backend, architecture and quality focus (testing, code review). I integrate LLMs (Anthropic, Azure OpenAI) into my projects and build with Claude Code every day.

Professional Experience

Full Stack Developer

Jan 2023 - Present

Holis · Paris · B2B SaaS for life-cycle assessment (LCA) · work-study contract

Joined as the 4th employee; the company is now about 20 people, 7 of them in tech.

- Owned the Ecopassport widget end to end: multi-tenant Node/Express and TypeScript server, PostgreSQL/Prisma, React SSR, 16 KB dependency-free client script; live at major e-commerce retailers.
- JMeter load test on every release, metrics delivered to clients: 52,509 requests, 0 errors, p95 at 1.29 s.
- Architecture decisions: server-side rendering so each regulatory update ships to every client site at once; dropped a planned Redis cache in favour of a client-side optimisation.
- Proposed and led a 30,000+ line refactoring, then the migrations to TypeScript, NestJS and an Nx monorepo (about 250,000 lines, 91 data models).
- Built the bilingual FR/EN LCA report generator: Word documents composed from editable templates, Chart.js charts rendered server-side.
- Non-regression suite for the calculation engine (Jest); co-developed supporting documents (Azure Blob Storage, signed URLs); GitHub Actions CI and Azure App Service deployment.

Web Integrator (internship)

2021

Team Tonic Services · Gagny, France

Projects

GPConnect · product designed and built solo, in production · gp-connect-gamma.vercel.app

2025 - 2026

Parcel marketplace between France and West Africa: identity verification (Stripe Identity), OTP proofs of hand-over and delivery, real-time chat, arbitrated disputes. OTP and OAuth login, RS256 JWT, CSRF protection; 270 unit tests, 73 e2e tests and 22 Playwright journeys in CI.

Next.js 14, NestJS 10, Prisma, PostgreSQL + PostGIS, Socket.io, Docker, GitHub Actions

Argument Engine · LLM-based debate assistant

2026, ongoing

Assistant that assesses how sound a line of reasoning is, without taking sides. LLM output validated by Zod schemas and coded state-transition rules, premise coherence graph, automated eval suite (symmetric trap cases, LLM judge).

NestJS, Next.js, Prisma, PostgreSQL, Anthropic and Azure OpenAI APIs, Jest

Mail Sorter · labels emails by contact and topic

2026, ongoing

Local app that labels emails across several mailboxes. Compared 4 approaches on real mailboxes: the chosen nearest-neighbour vote on embeddings was right 95 to 98% of the time above 0.9 confidence. Read-only IMAP sync enforced in code and tested.

Python, FastAPI, SQLite, Mistral embeddings, Next.js, pytest

Skills

Backend: TypeScript, Node.js, NestJS, Express, Python, FastAPI, REST APIs, Socket.io, OAuth, JWT, OTP

Front-end: React, Next.js (App Router, SSR, PWA), react-query, zod, react-hook-form

Data: PostgreSQL, PostGIS, Prisma, Drizzle, MySQL, MongoDB, SQLite

AI: LLM integration (Anthropic, Azure OpenAI), embeddings, automated evals, daily Claude Code user

Quality and DevOps: Jest, Vitest, Playwright, JMeter, GitHub Actions, Docker, Azure App Service, Nx monorepo

Languages: French (native), English (B2, daily technical reading and writing)

Education

Information Systems Architect (RNCP38114, master's level) · ETNA, work-study

2025 - 2026

Application Designer and Developer (bachelor's level) · ETNA, work-study

2023 - 2025

Web@cadémie (RNCP level 5, 2-year degree) · Epitech Paris

2021 - 2023
